LTG Tangential Fans - an advantage for optimum heating, cooling, drying, blasting

Many production processes require a linear extended and absolutely even distribution of air or other gases to the working area.

Because of their special design, tangential fans meet these requirements especially well. The rigid design and the use of high quality materials secure a long service life.

The working principle that does away with the need for additional baffles and vanes and the space saving design makes the use of tangential fans very economical.

Air flow principle

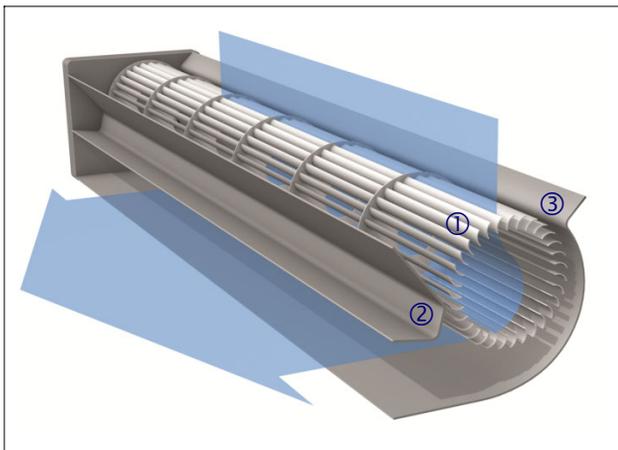

The air intake of tangential fans takes place over the whole length of the outer impeller periphery.

The air then flows into the impeller interior where it is reversed and accelerated by the vortex caused by the impeller rotation.

Finally the air is distributed at the discharge side over the whole impeller length. In this way the air flows through the impeller first from outside to inside and then from inside to outside.

The impeller is a cylindrical cage of forward curved impeller blades with two or more supporting discs.

The vortex separates suction side and discharge side at the narrowest line between impeller ① and vortex inducer ② and causes the flow pattern together with the scroll ③.

- ① impeller
- ② vortex inducer
- ③ fan scroll

Advantages

- Uniform air flow over the entire fan width. Additional baffles, plenums and guide vanes are not required.
- Space saving due to a 90 ° airflow deflection.
- The fan width can be exactly matched to the machine width.
- The air flow pattern does not change with wider machines (simplifies design and drawings of modular systems).
- Works equally well in any arrangement (right hand drive or left hand drive available).
- Low noise operation due to aerodynamic design based on 40 years experience.
- Long life expectancy due to the robust design and location of impeller bearings outside the hot air zone.
- Many bolt-on options.

Fields of application

- Agricultural technology
- air-conditioning technology
- apparatus engineering
- automotive industry
- bakery technology
- biomedical industry
- building material industry
- chemical industry
- cleaning technology
- control panel technology
- dedusting technology
- drying technology

LTG Tangential Fans Type TM Impeller Diameter 5" (125 mm)

Gas temperature -15 °F up to +160 °F (-25 °C up to +70 °C)

The tangential fan Type TM is a fan with close coupled motor and enhanced corrosion protection.

Operating conditions

Gas temperatures:

-15 °F up to max. +160 °F (-25 °C up to max. +70 °C)

Ambient temperatures:

-15 °F up to max. +105 °F (-25 °C up to max. +40 °C)
for the drive side with motor and

-15 °F up to max. +160 °F (-25 °C up to max. +70 °C)
for the counter side.

Range

Type	max. medium temperatures	Impeller length	Casing	Impeller	Motor
TMR 125/400/N TML 125/400/N	-15 °F to +160 °F (-25 °C to +70 °C)	15.75 inch (400 mm)	stainless steel, marine grade aluminum	galvanized steel	IP 55 2pole or 4pole
TMR 125/600/N TML 125/600/N	-15 °F to +160 °F (-25 °C to +70 °C)	23.50 inch (600 mm)			IP 55 2pole or 4pole

Tangential fan Type TMR 125 (right hand motor)
note: TMR = right hand motor, TML = left hand motor

LTG Tangential Fans Type TM

Impeller Diameter 5" (125 mm)

Specification and design features

Tangential fan with close coupled, spray water protected drive motor with terminal box.

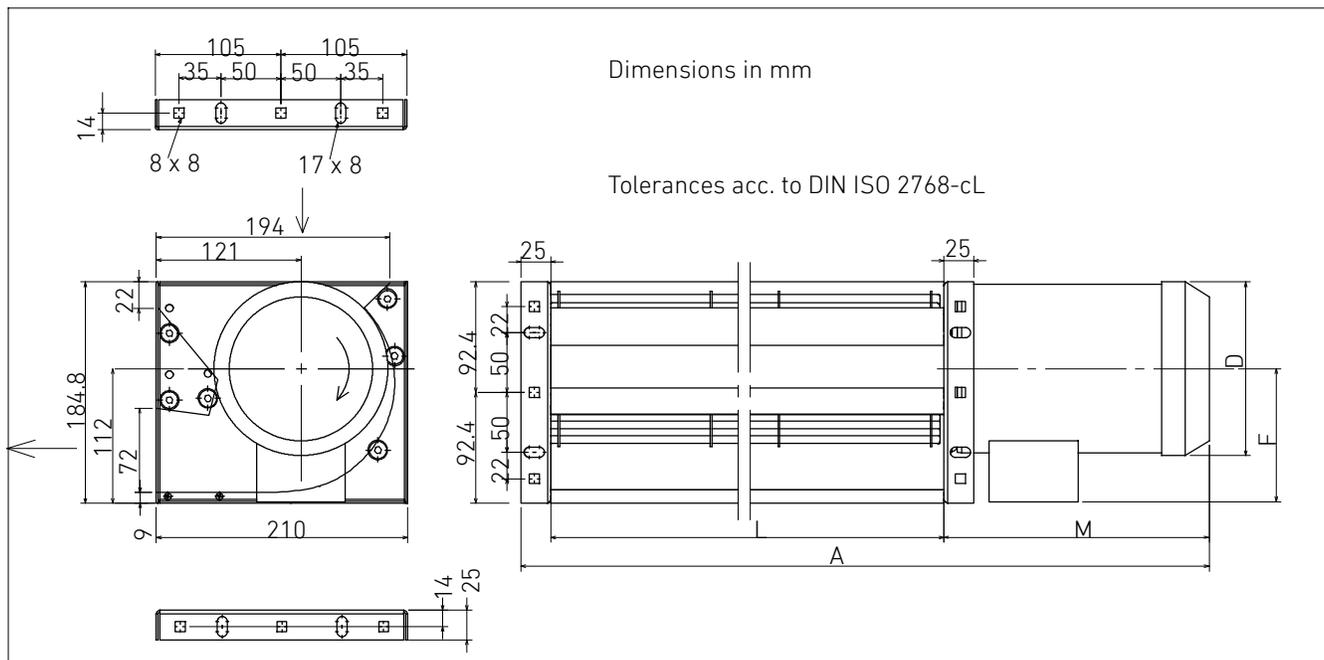

Rigid bolted, corrosion proof casing of marine grade aluminum. Side elements of stainless steel (1.4541). Impeller of galvanized steel.

On the drive side, the impeller shaft is connected via an elastic coupling directly to the motorshaft. On the counter-side, it is supported in a vibration dampened ball bearing. Bearing design life is 25,000 hours.

Intake and discharge openings have sealing profiles to allow direct connection of ducts and appliances.

The complete fan is balanced according to DIN ISO 21940-11, grade G 6.3.

* Due to different technical designs and motor brands the above dimensions may vary.

LTG Tangential Fans Type TM Impeller Diameter 5" (125 mm)

Position of the fan

Standard arrangement is horizontal. For vertical mounting the motor needs to be at the bottom.

Installation and start up

Mount the fans without any distortion to the plane of the base frame. Use only the bolt holes provided in the side elements for mounting.

To connect to ducts and appliances, plug in slots and sealing planes are provided over the entire fan width at the intake and discharge openings.

Make sure to observe the applicable safety codes before starting the fans.

The fans are designed for continuous operation with constant load. For frequent start/stop operation please check with LTG.

To keep the ambient temperature below max. at the bearings, it is necessary to insulate the side elements on site.

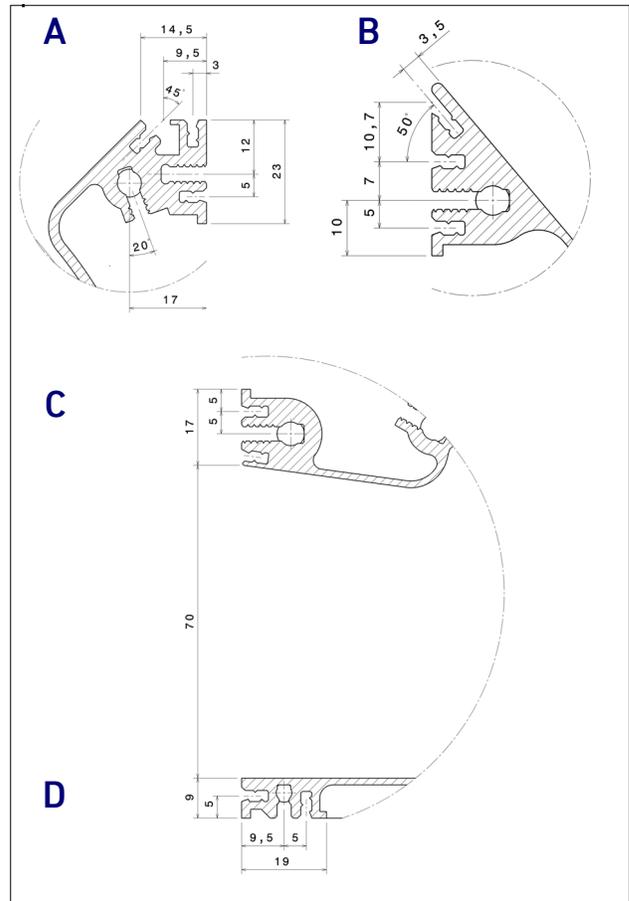

Motor arrangement

With the suction opening on top, viewed against the discharge opening, the drive motor is either on the right (TMR) or left (TML) hand side.

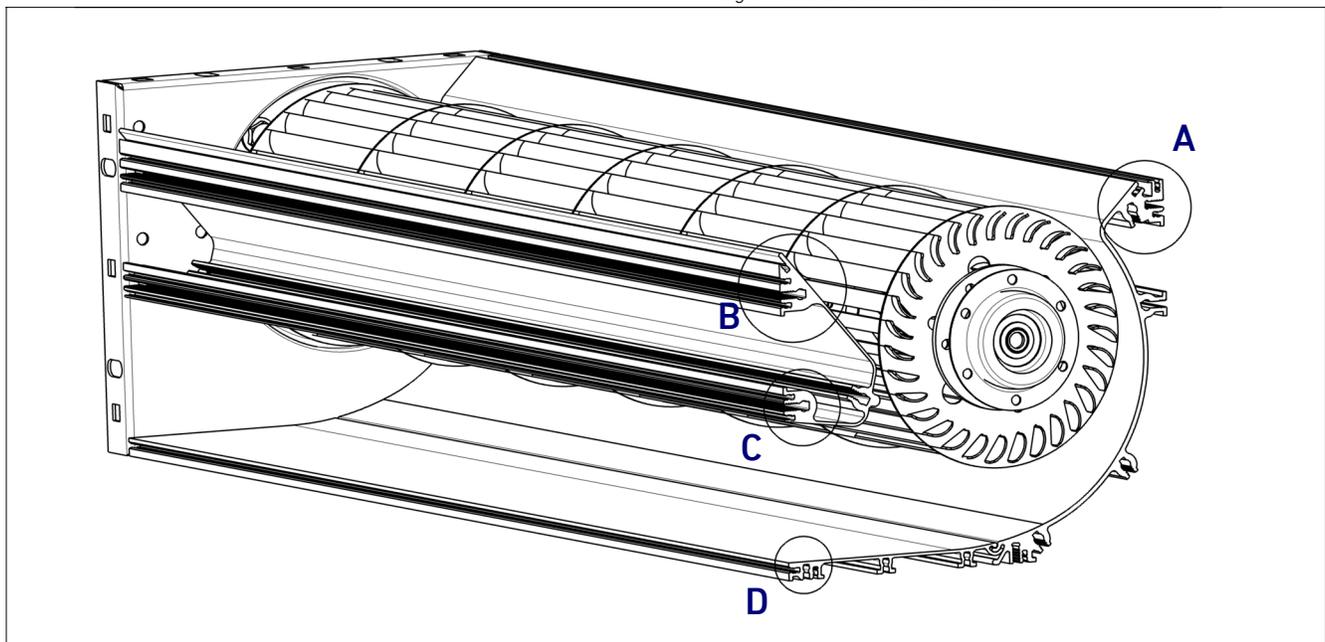

Electrical equipment

The fan is driven by a 4-pole 3-phase motor, 460 V / 60 Hz.

Enclosure is IP 55 according DIN 40050. This gives protection against dust deposits and low-pressure water jets from any direction.

Plug in slots over the full fan width

LTG Tangential Fans Type TM Impeller Diameter 6" (150 mm)

Gas temperature

-15 °F up to +160 °F (-25 °C up to +70 °C)

The tangential fan Type TM is a fan with close coupled motor and enhanced corrosion protection.

Operating conditions

Gas temperatures:

-15 °F up to max. + 160 °F (-25 °C up to max. +70 °C)

Ambient temperatures:

-15 °F up to max. + 105 °F (-25 °C up to max. +40 °C)
for the drive side with motor and

-15 °F up to max. + 160 °F (-25 °C up to max. +70 °C)
for the counter side.

LTG Tangential Fans Type TM / TMT Impeller Diameter 5 and 6" / 6" (125 and 150 mm / 150 mm)

Position of the fan

Standard arrangement is horizontal. For vertical mounting the motor needs to be at the bottom.

Installation and start up

Mount the fans without any distortion to the plane of the base frame. Use only the bolt holes provided in the side elements for mounting.

To connect to ducts and appliances, plug in slots and sealing planes are provided over the entire fan width at the intake and discharge openings.

Make sure to observe the applicable safety codes before starting the fans.

The fans are designed for continuous operation with constant load. For frequent start/stop operation please check with LTG.

To keep the ambient temperature below max. at the bearings, it is necessary to insulate the side elements on site.

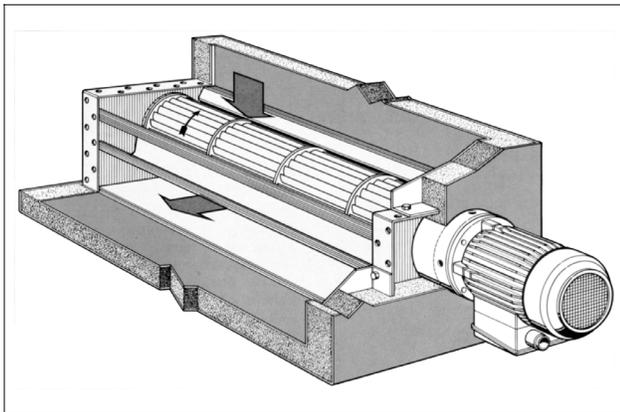

Motor arrangement

With the suction opening on top, viewed against the discharge opening, the drive motor is either on the right (TMR) or left (TML) hand side.

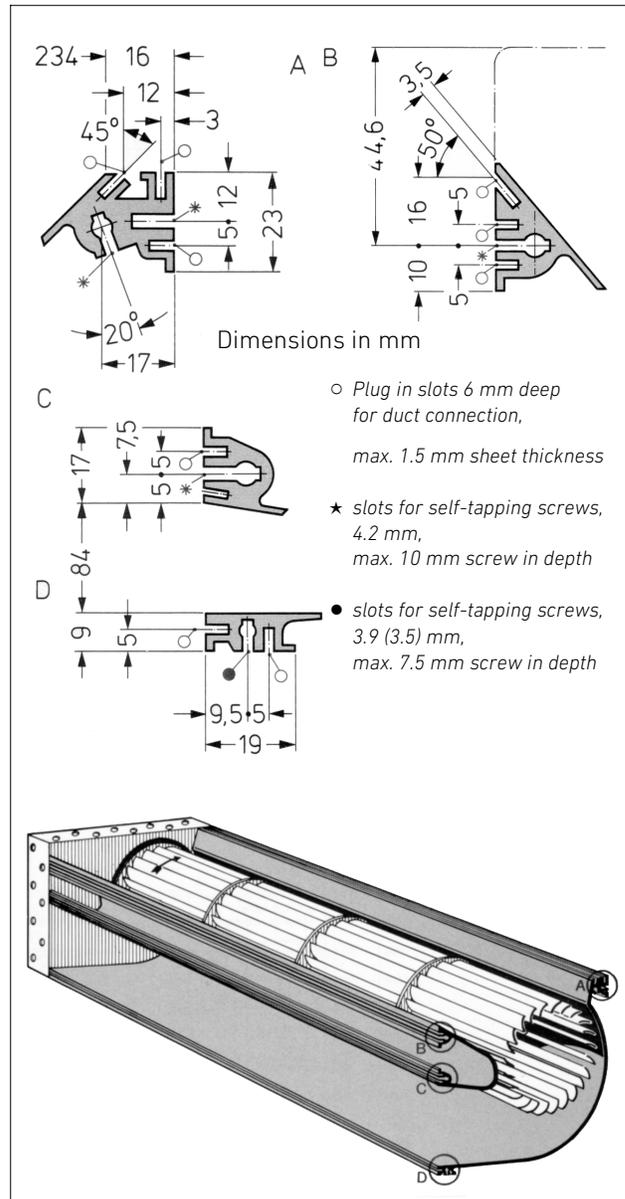

Electrical equipment

The fan is driven by a 4-pole 3-phase motor, 400 V/460 V / 50/60 Hz. Enclosure is IP 55. This gives protection against dust deposits and low-pressure water jets from any direction.

The motor coil insulation below nominal length 864 is class B, from nominal length up to 1264 it is class F.

Typical installation of type TMT with on site insulation

Plug in slots over the full fan width

LTG Tangential Fans Type TM Impeller Diameter 5" (125 mm)

Fan curves

Test conditions for the fan curves

The indicated curves are valid for an air density of $\rho = 0.075 \text{ lb/cft}$ (1.2 kg/m^3), a supply voltage of $U = 460 \text{ V}$ with $f = 60 \text{ Hz}$, if operated with a 4 pole motor.

The rating tests were done as laboratory test according to VDI 2044 with unrestricted inlet and discharge.

Acoustical data

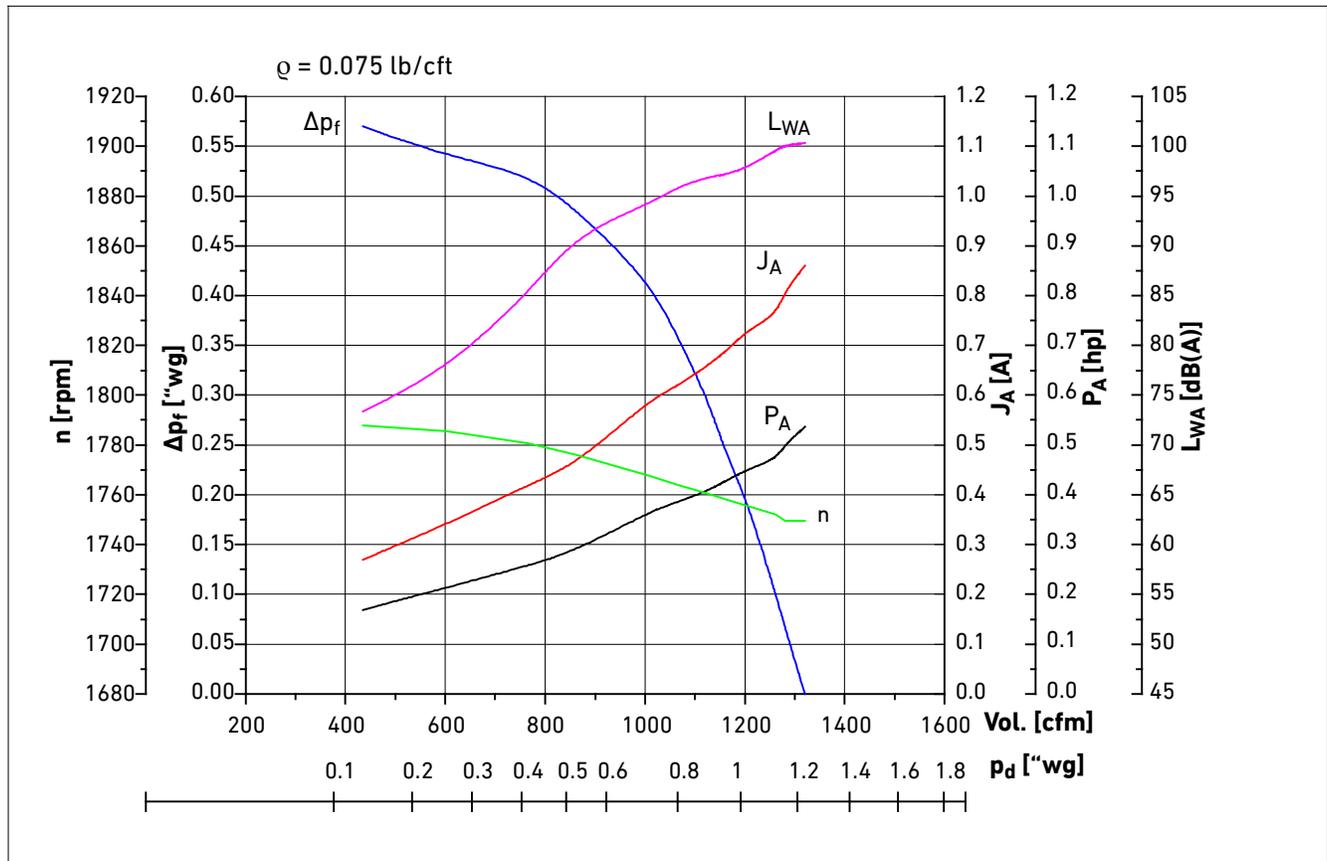

The acoustical data are for discharge side, tested in a reverberant field.

The A-weighted sound power level L_{WA} can be transformed into a A-weighted sound pressure level by the equation $L_{pA} = L_{WA} - 10 \times \log S/1 \text{ m}^2$.

For this the exact total applicable panel area S can be used.

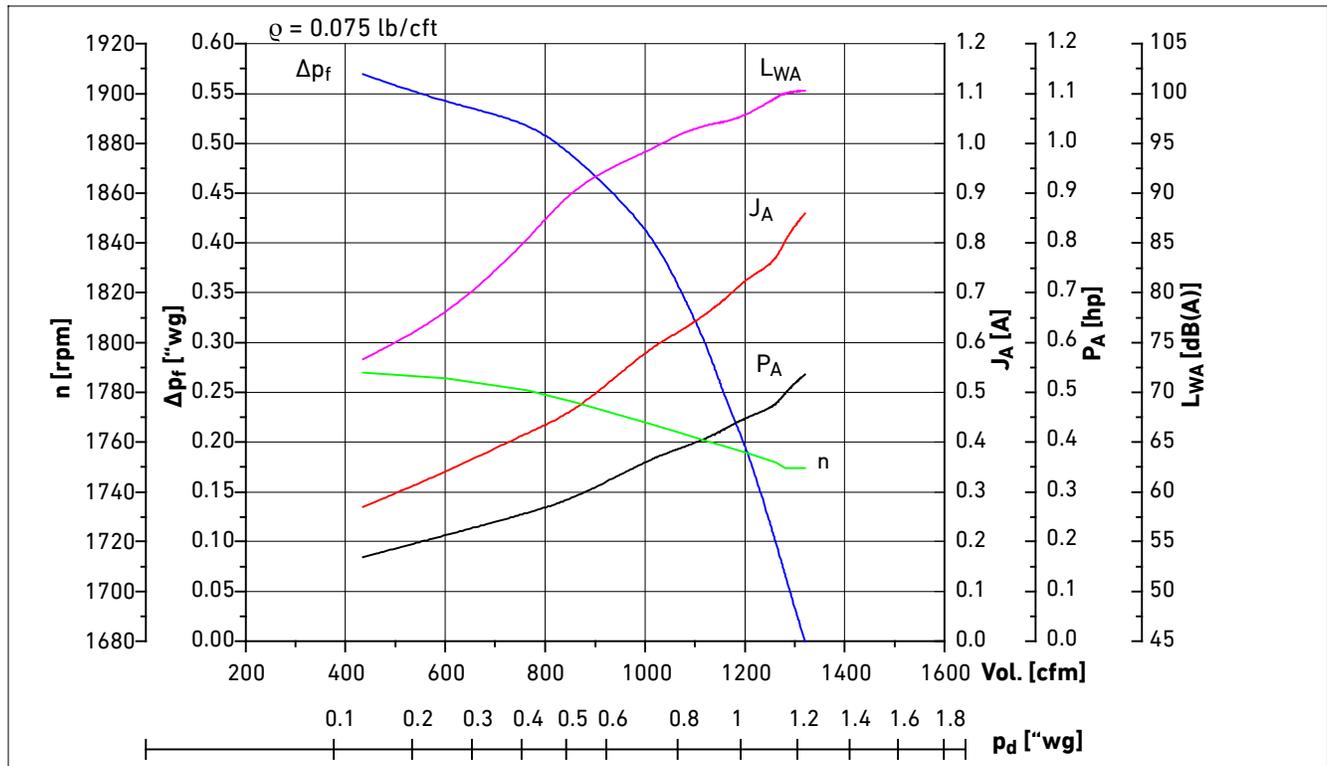

The sound pressure level in the free field in 1 m distance (full spheric sound radiation) is abt. 11 dB less than the sound power level.
